## **DETAILED ACTION**

### ***Election/Restrictions***

1. Claims 1-7 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on January 24, 2005.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claim 8 is rejected under 35 U.S.C. 102(b) as being anticipated by Anantha et al. (US 4,196,440).

Anantha et al. teach a method of forming a laterally extending trench in a semiconductor material underneath a base of a BJT, comprising (Figs. 2-6):

Choosing a predetermined crystal orientation, etching a vertically extending STI region region (Fig.2) next to the base, and using an anisotropic etchant to etch the laterally extending trench (40) to extend laterally from the STI. See also Col.4, lines 4-48.

### ***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and

Art Unit: 2811

the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over Anantha et al. (US 4,196,440) in view of Kawakita et al. (US 4,685,198).

Anantha et al. do not explicitly teach choosing the crystal orientation includes choosing a wafer with <100> orientation. Kawakita et al. teach vertical opening are formed in the surface of {100} silicon substrate. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to choose crystal orientation <100> as taught by Kawakita et al. in Anantha's method in order to obtain vertical opening in the silicon substrate.

#### ***Allowable Subject Matter***

6. Claims 10-15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter:

Prior art reference, taken along or in combination, do not teach or render obvious that the choosing of the crystal orientation includes choosing a lateral trench direction that is in the <110> direction.
